

Glacier National Park

Sprague, Adair Peak and Elder Fires

Continued Red Flag Warning for Gusty Winds; Cooler Weather Wednesday
Tuesday, September 12, 2017

Sprague Fire (5 miles northeast of West Glacier): Yesterday, the fire continued to flank to the North on Mt. Brown. Three water dropping helicopters kept hot spots in check on Mt. Brown near the lookout as well as on Snyder Ridge. Today, fire activity should be similar to yesterday. Walton Creek drainage may see some increased activity due to the slope alignment and westerly winds. The fire is 14,750 acres.

Structure protection work continues in the Lake McDonald Lodge and North Lake McDonald area: Sprinklers and road spraying around the Lake McDonald Lodge complex increased the humidity and cooled the immediate area, creating a "rain forest" micro-climate. Pumps and hose lay systems have been installed in the Avalanche Creek Campground, Trail of the Cedars area and North McDonald Lake area. Fuels reduction work around the historic ranger station is completed. The Wheeler Cabin is wrapped and firefighters have made good progress extinguishing hotspots around the Sperry Chalet complex.

Elder Creek Fire (40 miles north of West Glacier on the US/Canada Border): The fire has showed little movement over the last couple of days as the prevailing winds blew the fire back into itself. Some interior torching may be observed today. Firefighters continue to monitor fire activity in the area. The following trails are closed due to fire activity: Kishenehn Trail from the road to the Canadian border, Kishenehn Creek Trail from the Patrol Cabin to the border, and the Kintla Trail from Kishenehn Creek to Boulder Pass Trail (over Starvation Ridge). The fire is 282 acres in Glacier National Park (2,545 acres in total).

Adair Peak Fire (18 miles north/northwest of West Glacier): Yesterday, the Adair Fire saw active burning in the mixed conifer stands along Logging Lake. Today, expect moderate fire behavior with torching and crown runs near Logging Lake. The Adair Fire is 2,890 acres.

Smoke and Weather Conditions: Smoke from other fires in Montana and British Columbia are contributing to the haziness in the area. Forecast models continue to show a weather pattern change towards wetter and cooler conditions by Thursday. You can monitor current smoke and visibility conditions on the park's webcams at <http://go.nps.gov/glacwebcams>.

An evacuation ORDER is in place: Area residents and park visitors were evacuated on Sunday, September 3, 2017. The evacuation order remains in effect from the south end of Lake McDonald north to Logan Pass. This includes the North McDonald Road. This does **not** include the Apgar area at this time. Logan Pass is still accessible from the east side of the park. The duration of the evacuation is unknown at this time.

MOST areas of the park remain OPEN: 18 miles of the Going-to-the-Sun Road between St. Mary and Logan Pass, Granite Park Chalet, Two Medicine, St. Mary, and Many Glacier are currently open. Please check the park website for closure information and current conditions at <https://nps.gov/glac>.
